

COLLECTION 2024

Welcome to the world of Trilobite®!

Riding a motorcycle is a thrilling experience, but it can also be dangerous if you do not have the proper equipment. That's why we have been serving you Trilobite® Motorcycle Jeans since 2012! To keep you safe, comfortable, and stylish when behind the bars. Our unique fabrics are crafted with advanced technologies that provide an unbeatable combination of protection, comfort, and style. An innovative family of TRI-STRETCHER materials underlines the key features of the whole Trilobite® range. We are introducing you the world's most advanced motorcycle jeans from the hearth of Europe! Ride in Style, Ride Safe!

CAUTION: When you try Trilobite®, you will never want to wear any other pair of motorcycle jeans!

- Adjustability:**

 - Belt loops for adjustment

COMES IN 3 DIFFERENT SHAPES:

FINE

FOR STRAIGHT FIGURES WITH JEANS TOO TIGHT IN THE WAIST

Do you have straight waist, slim hips, and thighs? ...**FINE** shape is your choice. It will give you the right shape of your bum and it does not stress your belly.

REGULAR

THE WAIST WILL FIT PERFECTLY AND LEGS WILL LOOK LONGER

Are you evenly proportioned from waist to thighs? ...**REGULAR** shape is your choice. It will give you the right shape of your bum and the legs will appear slightly longer.

DARING

NO MORE GAP IN THE BACK THANKS TO HIGHER BACK RISE

Do you have defined waist, fuller hips and thighs? ...**DARING** shape is your choice. Thanks to the higher waist, you will not see the gap in the back and your bum will look great.

SIZES:

- WOMEN fine/regular/daring 26 | 28 | 30 | 32 | 34 | 36 | 38

LIGHTWEIGHT MATERIAL

BREATHABILITY

WATERPROOF 6000 mm

REFLECTIVE PARTS

20 x 14 cm COMPACTLY FOLDED

STRING BAG INCLUDED

MEN AND WOMEN VERSION AVAILABLE

SPECIFICATIONS:

- Outer material:**

 - Nylon with PU coating

Features:

 - Lightweight and breathable material
 - Waterproof: 6 000 mm water column
 - Long zipper on the sides for comfortable dressing
 - Adjustable velcro flap
 - Can be compactly folded into the string bag (20x14 cm)

Visibility:

 - Reflective parts and logos
- SIZES:**

 - MEN M | L | XL | 2XL | 3XL | 4XL | 5XL
 - WOMEN S | M | L | XL | 2XL | 3XL

BREATHABILITY

SPECIFICATIONS:

- Material:**

 - Made from **TRI-BASE®** (Kevlar® by progressive Dupont™ technology, Protex-M, Cotton, Lycra). It can be worn under any jacket or shirt. They keep you cooler and more protected.
- Protection:**

 - Includes **shoulders and elbows pockets** for protectors
 - We recommend SAS-TEC CE level 2 SC-1/KB-2 protectors
- Features:**

 - Especially designed and developed to be **flexible, super comfortable, with highest level of protection**
 - Thanks to its **breathability**, shirt can be used even in temperature-demanding conditions
- Very comfortable to wear due to a balanced combination of softness, breathability, and good moisture wicking from the body.
 - Trilobite® Skintec underwear shirt will keep you warm in winter but still let the air in during hot summer days.
- The natural color of this protective fiber is canary yellow. Once exposed to sunlight it will deepen to a goldenrod shade. Slight variation in color (as well as the color change) is not only normal, but to be expected.

- SIZES:**
- MEN S | M | L | XL | 2XL | 3XL
 - WOMEN XS | S | M | L | XL | 2XL

TRITECHNOLOGY

Let us introduce you some of our technologies we use in our products. At Trilobite®, we recognize 3 crucial elements, **SAFETY** / **COMFORT** / **STYLE**. Everytime we make new product we try to find their right balance.

Trilobite® team knows very well that everyone wants to ride **SAFELY**. However, there are more and more bikers who prefer to ride in **STYLE**, but at the end, most bikers prefer their riding **COMFORT**.

We are here to answer any technical question any biker or Trilobite® customer might have regarding our product range. Whatever the riders are searching for in the world of motorcycle apparel, they will always find it in the Trilobite® range.

Trilobite® R&D team has already developed various new materials which help bikers boost up their riding experience. Trilobite® will help you ride **SAFELY**, with a decent portion of **STYLE**, and last but not least, with a decent portion of **COMFORT**.

If you are interested in what is behind the function of Trilobite® product and what literally is inside the garment, find out more on the next pages.

CE CERTIFICATIONS OF CLOTHING - PPE FOR MOTORCYCLE USAGE

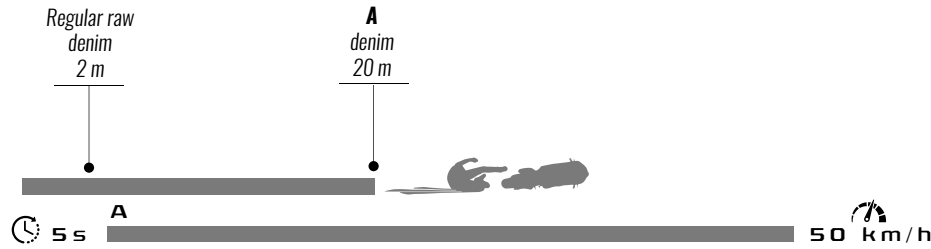

In 2020, the European Union established the new certification standard EN 17092 and thus changed the way users view their safety when riding a motorcycle. New standards are becoming more and more familiar to users, but repetition is the mother of wisdom. That is why we have prepared this overview for you, thanks to which you can easily find out what level of safety you need for your type of motorcycle and riding style.

The EN 17092 certification standard is divided into several groups depending on the level of comfort and safety of the clothing. The resulting values are indicated to the user using the designations "A", "AA" and "AAA", where "A" is the lowest degree of protection and "AAA" the highest. The red CE label is supplemented with a biker pictogram.

Clothing marked "A"

Clothing marked "A" using test methods according to EN 17092-4:2020 provides basic protection of the rider against impact and abrasion. Such clothing is very comfortable and light, as it is mostly made of one layer of fabric without reinforcement (for example, using Kevlar). You should also get this garment at a very affordable price. It is suitable for everyday use in the city when you do not expect to drive at high speed.

Slide time and distance of level "A"

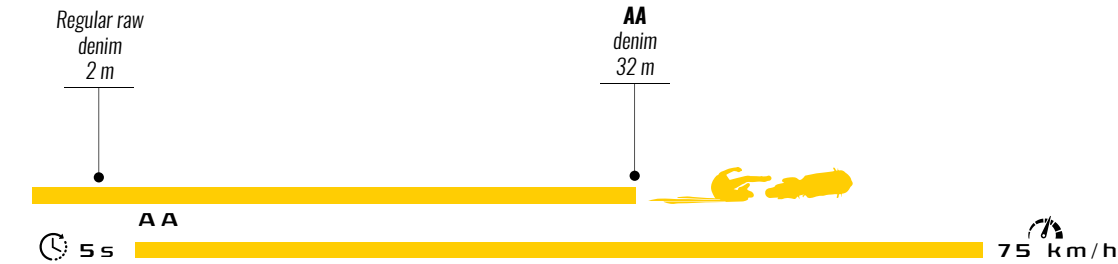

Distance resistance comparison using the CE-13595-2 standard (8m/s). Slide time and speed comparison using new EU standard EN 17092:2020.

You won't find many such clothes in the Trilobite portfolio. We focus on high class clothing using sophisticated materials.

Clothing marked "AA"

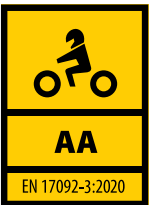

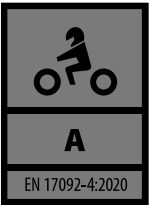

Clothing bearing the "AA" label, tested according to EN 17092-3:2020 provides a higher level of protection. These clothes are made using reinforcing materials (e.g. kevlar), special fabrics that are composed of several types of fibers or sandwich (several layers of materials). The clothes will still be comfortable, but they will weigh more. It is suitable for everyday use in the city, but also for touring. In particular, leather products marked "AA" are also suitable for use on the circuit.

Slide time and distance of level "A"

Distance resistance comparison using the CE-13595-2 standard (8m/s). Slide time and speed comparison using new EU standard EN 17092:2020.

You will find most of Trilobite garments in this segment, marked and CE Certified as „AA“.

Clothing marked "AAA"

The "AAA" designation, tested according to EN 17092-2:2020, provides the highest level of protection for the highest level of risk. This clothing provides maximum protection, but at the same time it is more robust, heavier and usually less comfortable to wear. Examples are garments made of special materials or leather racing suits. They are suitable for very fast driving and at the same time for driving on the track.

Slide time and distance of level "AAA"

Distance resistance comparison using the CE-13595-2 standard (8m/s). Slide time and speed comparison using new EU standard EN 17092:2020.

Trilobite Parado Circuit jeans contains special materials to cover the impact zones. Trilobite team develops special fabrics that meet the strictest requirements of CE testing.

Other certifications

All materials used in the production of Trilobite clothing also meet other, no less important, tests:

- ISO 13937-2
Properties of flat textiles during tearing

- ISO 12947-2
Determination of abrasion resistance of flat textiles

- ASTM D3107
Standard Test Methods for Stretch Properties of Fabrics Woven from Stretch Yarns

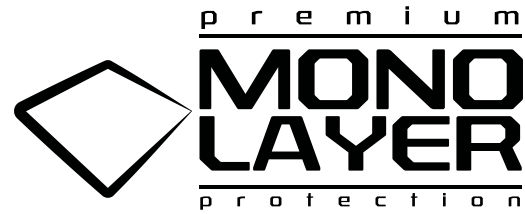

- ASTM D1424
Standard Test Method for Tearing Strength of Fabrics by Falling-Pendulum

PROTECTORS CE level 2

Our products are equipped with removable CE level 2 certified protectors. This high-quality soft foam protectors offer excellent safety functions when riding a motorcycle. Protectors will guarantee maximum impact protection.

MONOLAYER MOTORCYCLE JEANS? THE FUTURE OF MOTORCYCLING!

Simply put, monolayer jeans are made by weaving abrasion resistant fibres with other functional fibres into one actual layer, instead of the layers being placed on top of each other. This creates a monolayer fabric.

✓ LIGHTWEIGHT AND BREATHABILITY

The main appeal is comfort. People ride motorcycles because they're fun. It should never feel like a chore, so the last thing you want is to be weighed down by heavy or uncomfortable gear. Monolayer jeans are lighter, so they'll feel more natural and flexible.

In the summer, this will be totally handy, because lighter jeans won't feel nearly as hot when you're riding in those scorching afternoons.

✓ HIGH SAFETY

Monolayer jeans will usually offer premium protection than lined denim. This is because when the abrasion resistance material is weaved into the fabric, there will be a larger area of protective coverage, respectively it allows the whole surface to be abrasion resistant.

✓ UNIQUE STYLE

Monolayer jeans also are more stylish. The lighter weight allows for jeans to be made in a skinny fit and the overall lack of bulk means that your riding pants will look a lot closer to a casual pair of jeans.

TRI-STRETCHER®

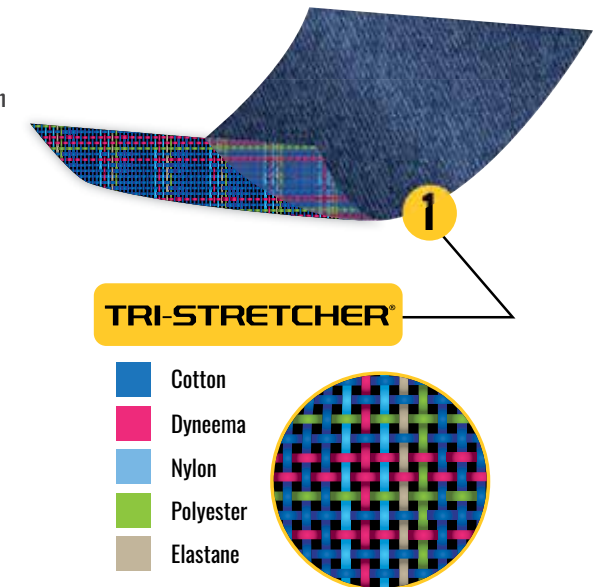

A special mix of cotton, Dyneema, nylon, polyester, and elastane patented by Bikers Crown Ltd., the sole owner and designer of Trilobite Motorcycle Jeans®.

With recent breakthroughs in synthetic fibres, motorcycle riding jeans can be made lighter than ever. For years, Kevlar was the most popular material used for jeans, but new generation fibres, such as Dyneema, are the future of riding.

It's a synthetic fabric that's unique for its amazing strength while still being light in weight. Dyneema is tough enough to keep you protected in a crash, but unlike other materials, it doesn't compromise on comfort.

It's also been used in surgery, the shipping industry, helicopters, and space shuttles. Innovations like this have seen Kevlar jeans slowly fall out of favor, with impressive new fibres offering much more comfort.

Just like full leathers fell out of style, Kevlar jeans are making way for the next big thing. Monolayer is the future.

 with Dyneema®

TRI-STRETCHER® PRO 2.0 DENIM material

A completely new composition in a mix of DYNEEMA®, Elastane, Polyester, Nylon and Cotton. Despite its great lightness, breathability, and flexibility, this newly mixed denim has a high level of abrasion resistance and strength.

Dyneema® Denim, in majority, is a mix of Polyethylene fiber with Cotton. Dyneema® yarn is based on a Ultra High Molecular Weight Polyethylene (UHMWPE) which is manufactured using a special spinning process resulting in a fiber that has an extreme high crystallinity with following properties:

EXTREME HIGH TENSILE STRENGTH - Depending on the Dyneema® content in the denim, it is extremely difficult to tear or break the fabric. It is claimed to be 15 times as strong as steel.

HIGH CUT RESISTANCE - Denim that contains more than 5 - 10% Dyneema® will have noticeably higher cut resistance compared to regular fabrics.

ABRASION RESISTANCE - Using half the amount of Dyneema® improves the abrasion resistance of a single-layer motorcycle denim with aramid by 70%. The like-for-like improvement is 300%.

CHEMICALLY INERT - Even though Dyneema® itself is chemically inert and therefore resists almost all types of chemicals, it is not recommended to bleach, nor dry-clean denim with Dyneema® to prevent quality issues related to the Cotton fiber in the denim.

HEAT SENSITIVE - Dyneema® has a melting temperature of 140 - 144°C and therefore any exposure to temperatures higher than 130°C, even for short periods (seconds) should be avoided. Hence the recommendation to iron at max 110°C / 230°F and tumble dry at low temperatures.

TRI-STRETCHER PRO 2.0 DENIM® is a patented material of BIKERS CROWN Ltd.
TRI-STRETCHER PRO 2.0 DENIM® and TRILOBITE® are trademarks of BIKERS CROWN Ltd.

 Designed and developed
in the Czech Republic

TRI-STRETCHER® FABRIC material

A completely new composition in a mix of DYNEEMA®, Elastane, Polyester and Cotton. Despite its great lightness, breathability, and flexibility, this newly mixed denim has a high level of abrasion resistance and strength.

Dyneema® Denim, in majority, is a mix of Polyethylene fiber with Cotton. Dyneema® yarn is based on a Ultra High Molecular Weight Polyethylene (UHMWPE) which is manufactured using a special spinning process resulting in a fiber that has an extreme high crystallinity with following properties:

TRI-FORCE[®]
material

Tri-Force[®] is made by assembling cotton fiber with UHMWPE fiber (Cotton, UHMWPE, Elasto Multi-Ester, Elastane). This exclusive technology produces genuine denim with a core framework that gives it the mechanical qualities of leather.

Tri-Force[®] is resistant to abrasion, snagging and tearing, and provides exceptional comfort in all seasons. The great thing is that the technology is integrated directly into the fabric and not used as a lining for garment.

It is the only textile capable of protecting against abrasion (including as defined in the motorcycle standard 13595-2) with a single layer of fabric, while still providing the comfort and look of real jeans. Tri-Force[®] is composite fabric, but it is also flexible, soft, absorbant and breathable.

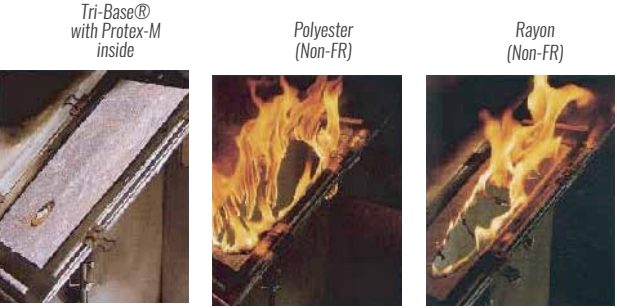

TRI-COMF[®]
material

PROTECTION / COMFORT / TEMPERATURE CONTROL

The newly developed TRI-COMF[®] fiber has an advantage of obtaining the highest ratio of safety and maximum comfort. This textile 3-component composition is adapted and developed so that its aramid part Kevlar by Dupont[®] protects against abrasion after falling from a motorcycle, and thus provides maximum body protection. The second part of this fiber is a flexible element Lycra, guaranteeing the greatest comfort in every movement on the motorcycle and beyond. At the bottom of the TRI-COMF[®] fabric, which faces the body, is the third and final component of Coolmax[®], a hydrophobic material that, thanks to its ability to wick moisture, increases the thermal regulation of your body - thus prevents from sweating.

Kevlar[®] and DuPont[™] are trademarks or registered trademarks of E.I. du Pont de Nemours and Company.

Self-extinguishes when flame source is removed Fire spreads even after flame source is removed

30 seconds after flame source is removed

TRI-BASE®
material

TRI-BASE® is a material which combines Dupont™ by progressive Kevlar® trechnology, Protex-M fibers, Cotton and Lycra®. Thanks to this composition of materials, strength, flame retardancy, heat resistance and comfort are achieved.

Special fibers of Protex-M inside TRI-BASE® fabric prevent the flame spread and the ability to stop combustion. When the flame source is removed Protex-M has a self-extinguishing nature by which combustion stops immediately. When thermoplastic fibers such as polyester and nylon melt, they produce hazardous high-temperature droplets that could cause severe burns to the skin. Protex-M melt-resistance and carbonization attribute not only to extinguishing the fire but also play an important role in preventing secondary injuries.

Protex is a high performance inherently flame retardant self-extinguishing fiber. Its advanced FR properties when blended with non-FR fibers improve their overall performance.

Key advantages of this Protex-M material are:

- **INHERENTLY FLAME RETARDANT** - Protex-M is inherently flame retardant product in which the fiber resin itself contains the flame retardant ingredient. When the flame source is removed fiber has a self-extinguishing nature by which combustion stops immediately. Unlike FR treatments, there is no deterioration in flame retardanacy after repeated washing or normal use over time.
- **MELT RESISTANT** - using of Protex-M fibre stops the spread of the fire and extinguishes it with the char barrier which forms when the flame source appears is removed. Unlike other thermoplastic fibers, such as polyester, Protex does not melt or form droplets that could stick to skin and cause injury.
- **HIGHLY BLENDABLE** - the superior properties of Protex-M allow for blending with flammable fibers in various combinations to achieve a high level of FR performance.
- **EASY PROCESSING** - Protex-M can be blended with other fibers for blending or in various fabric combinations. In most cases it can be processed under the same conditions as conventional acrylic fiber.
- **SOFT AND LIGHT** - Protex-M is light, warm, soft and flexible due to its unique fiber form.

PROTECTIVE LINING made with Kevlar® by DuPont™ technology
material

DuPont™ KEVLAR® is an organic fibre in the aromatic polyamide (aramid) family. The chemical structure of para-aramids distinguishes them from other commercial man-made and natural fibers and gives KEVLAR® its unique properties. It has high strength, high modulus (stiffness), toughness and thermal stability. In addition, it is resistant to many of the chemicals and solvents encountered in today's industrial environment. This combination of properties makes it an exceptional fibre for use in tyre reinforcement, ballistics applications, ropes and cables, and in protective apparel where high strength, and thermal, puncture, and cut resistance are required.

BETTER, STRONGER AND SAFER WITH KEVLAR® FIBER

Versatile and strong, Kevlar® fiber is more than just a series of threads. DuPont™ Kevlar® fibers are used in a variety of clothing, accessories, and equipment to help make them safer and more durable. With five times the strength of steel based on an equal weight basis, it's the go-to fiber for protective apparel and accessories.

- original aramid fiber by the progressive DuPont™ technology which is distinguished by strength and abrasion resistance
- tear resistance
- a high melting degree (450°C) ensures safety in case of high frictional temperature

CORDURA® DENIM WITH COOLMAX® material

12.5 oz Cordura® denim with COOLMAX® fibers

CORDURA® Denim fabric helps the jeans last longer than traditional 100% cotton denim. CORDURA® Denim fabric retains an authentic look and feel of cotton denim, but with added abrasion resistance and toughness. Jeans made with CORDURA® Denim fabric are exceptionally durable without compromising on comfort and style. Ride style and ride safely in TRILOBITE® - jeans made with CORDURA® Denim fabric.

The main advantage of CORDURA® denim fabric is its extreme durability, tearing, and abrasion resistance. At the same time, it offers the feel and look of classic denim, therefore it gives the civil look to the apparel.

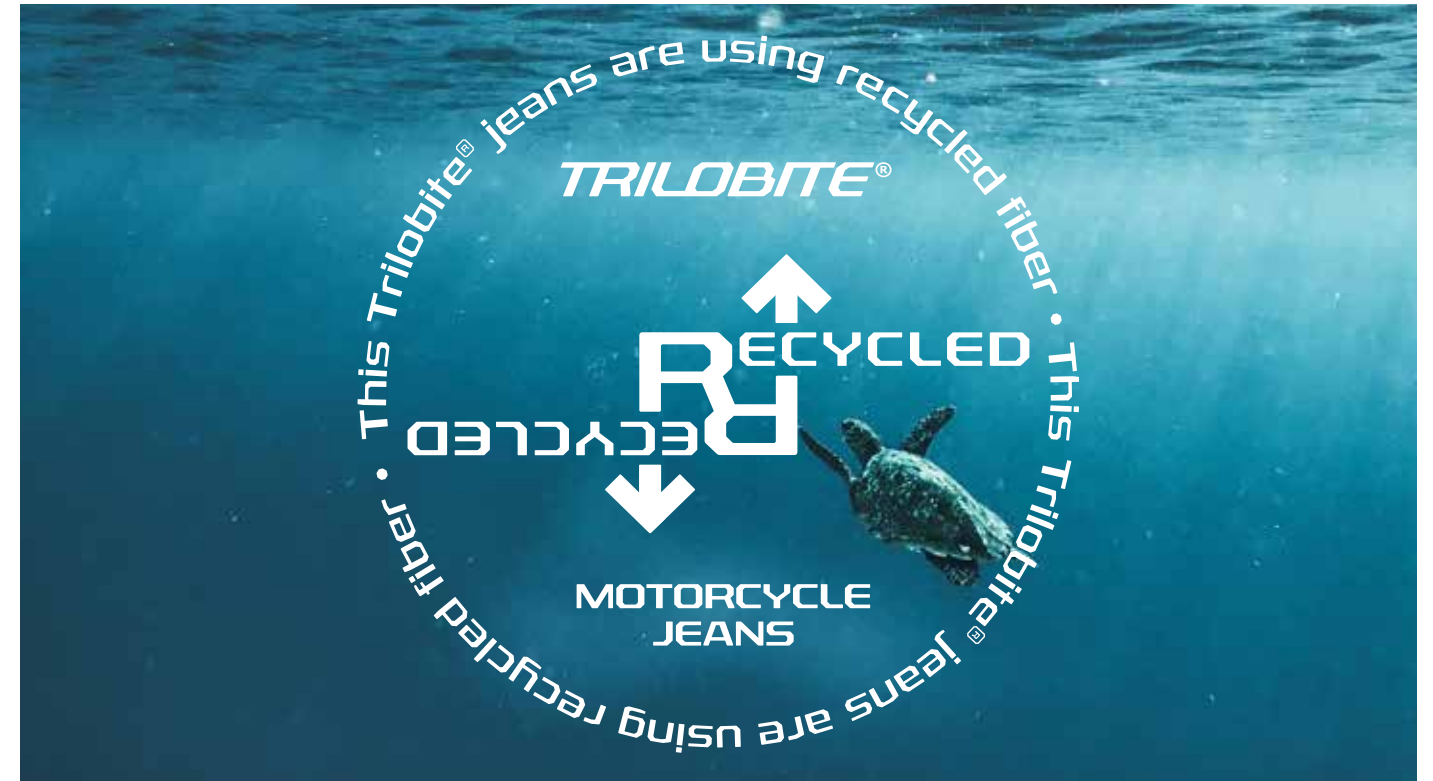

COOLMAX® technology is engineered for everyday comfort and performance. It has added cooling and drying performance to CORDURA® denim fabric. Adding the COOLMAX® fibers in denim means creating the moisture outlet system inside the fabric. This fiber system takes the moisture to the upper layer of the fabric which allows the rider to stay cool, dry and feel more comfortable when it comes on hot days.

Additional key benefits of CORDURA® Denim fabric include:

The authentic look and feel of traditional 100% cotton denim.

Exceptional abrasion resistance - Four times more resistant to abrasion than standard 100% cotton denim fabric.

The heritage of the CORDURA® brand which has proven performance in many of the world's toughest environments.

TRILOBITE® RECYCLED material

TRILOBITE® RECYCLED STANDARDS

Trilobite® target is to change the conventional way of motorcycle apparel production. While in the sports apparel industry it is nowadays quite common to use recycled materials for garment production, especially in ski & snowboard technical apparel, in the motorcycle apparel industry it is a unique approach.

Trilobite® was probably one of the first motorcycle apparel brands which used recycled materials for garment production.

Although Trilobite is a motorcycle technical apparel maker, we still keep in mind the importance of a clean environment. We know it is not necessary to use natural resources in a careless way. Using waste as a raw material allows minimizing the consumption of natural resources. Trilobite® commits to help save the planet.

Trilobite® Premium Aramid Fashion future goal is to produce motorcycle apparel from 100% recycled materials.

In this collection Trilobite came to the market with products, which contain either Recycled Polyester or Recycled Cotton. Using recycled cotton helps to reduce the use of virgin Cotton, and thus the significant water, CO2 and other impacts from cotton farming. The pre-consumer Cotton from industry and post-consumer Cotton from discarded clothes goes to grinding process and then raw material is made again. After that, the raw material is processed into yarn and the yarn is turned into recycled Cotton.

Besides recycled Cotton, Trilobite® also uses recycled Polyester. By integrating 100% recycled polyester fabrics in garments Trilobite® is keeping bottles and other plastics out of the ocean. By taking 70 bottles out of the ocean we get 1 kg of recycled polyester. 14 bottles collected from the ocean to be used during the production of 1 Trilobite jacket for the lining. Besides, we help to save also the energy because the energy consumption during the production of recycled Polyester is less than what is needed to produce the virgin Polyester. In particular, it takes up to 53% less energy.

Trilobite® wants to keep our planet clean!

TRI-TEX®
membrane

TRI-TEX® is a microporous Polyurethane coated membrane with pores of different sizes. TRI-TEX® membrane is waterproof, breathable, and windproof.

The waterproofness of the membrane is measured on the basis of the water column under the pressure of which the material starts to allow water through it. TRI-TEX® is able to hold up to 10 000 mm water column.

The breathability of the membrane means to what extent the membrane is able to let the body moisture vapor through. Thus, this ability reduces overheating and moisture retention under the membrane layer. Measured in g/cm²/24h TRI-TEX® membrane reaches the value of 10 000 g.

WATERPROOF - TRI-TEX® membrane is waterproof. It protects rider's body from the rain and water drops. Thanks to this membrane you will stay dry and feel comfortable.

BREATHABLE - TRI-TEX® is a breathable membrane. It allows the body moisture to evaporate and lets through to the outside of the garment. Thus, the rider stays dry and feels still comfortable.

denim

TRI-TEX®

mesh lining

B-DRY®
laminated material

The main advantage of B-DRY is its waterproof features. Three directly laminated layers ensure that you always ride dry with maximum comfort, no matter if you travel in the rain. Water will not get to your body as the laminated nanomembrane works as a barrier that will not let water get to your body as it stops in above layers which dry again quickly.

wax cotton

TRI-TEX®

2-LAYER WAX COTTON®
laminated material

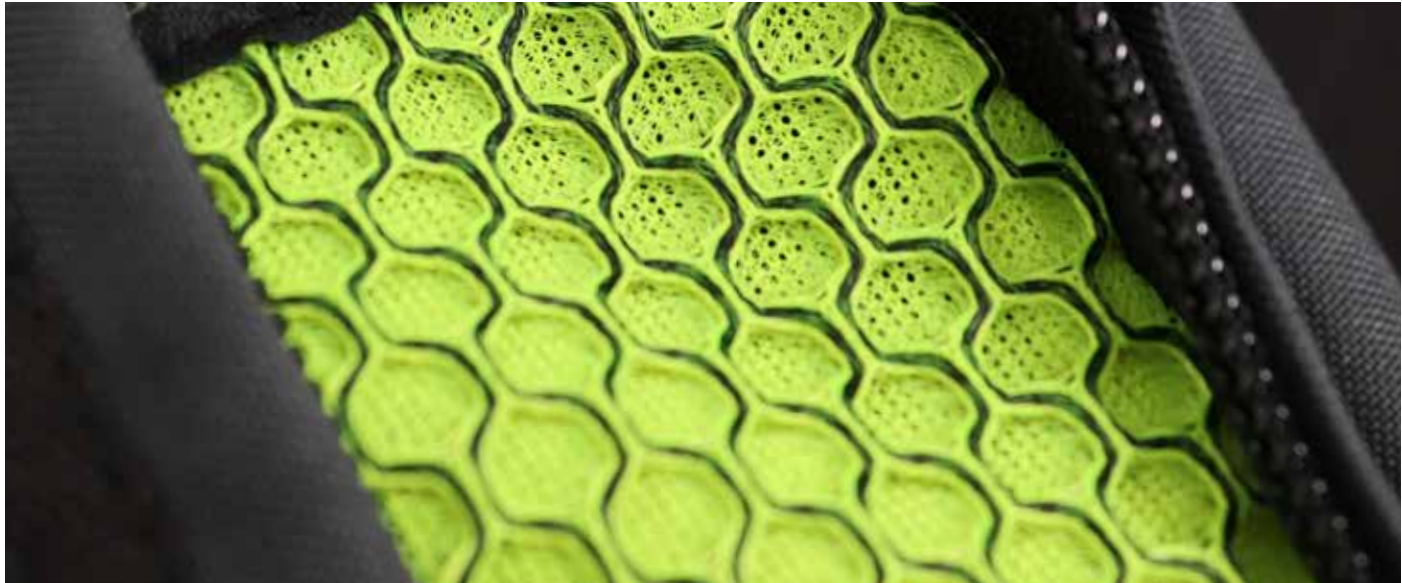

The concept of Wax Cotton was originally developed in the early 15th century by sailors in England and Scotland. Over the centuries it became very popular for the great performance. Waxed Cotton requires only minimal care to maintain its appearance and can go years without having to be washed. The sprayed wax on top cotton layer formula is non-toxic and non-hazardous. It performs great in both hot and cold temperatures. The refined wax finish provides an additional layer of protection from rain, moisture and time. Waxed canvas has a long lifespan behaving much like leather. Trilobite® Premium Aramid Fashion uses the best Waxed Cotton on the market to increase the product lifespan and performance.

HYDROPHOBIC TREATMENT

It concerns hydrophobic treatment of textile materials, knittings and other fabrics. On the surface there is a thin layer of nanoparticles and this way an extremely water and oil repellent surface is created. All Trilobite waterproof riding apparel is hydrophobically treated which gives the products additional waterproof properties.

The principle of hydrophobic treatment is that every single fiber is covered with a thin layer of nanoparticles. The result is an extremely high level of hydrophobic features which gives no chance to liquids to stick to the surface of the material thus soil or even damage the fabric.

3D MESH
material

GENUINE LEATHER
material

TECH MESH
material

RIPSTOP
material

TECH-AIR® COMPATIBLE

In cooperation with Alpinestars® S.p.A we developed and designed great collection of motorcycle jackets which are compatible with Tech-Air® 5 electronic airbag vest.

4AIRBAG DESIGNED®

You can't make a bad choice when comes to choosing the right garment working with electronic airbag system. If you can see this logo on the jacket you know it will work with electronic airbag vest.

CHEVROON® ARH 5.0

This element is especially developed at the back of the jacket which ensures maximum comfort during wearing Tech-Air® 5 electronic airbag vest. The Chevroom® ARH 5.0 passes through every layer of the jacket and thanks to its flexible materials, it prevents uncomfortable tension of the jacket which could be caused in a regular jacket by the raised control unit on the back of the Tech-Air® 5 vest.

Trilobite® appreciates its customers by offering the Trilobite Crash Program.
Any rider wearing the Trilobite motorcycle apparel during a traffic accident, damaging its motorcycle Trilobite clothing, has a chance to receive brand new items.
You can get a FREE new jeans!

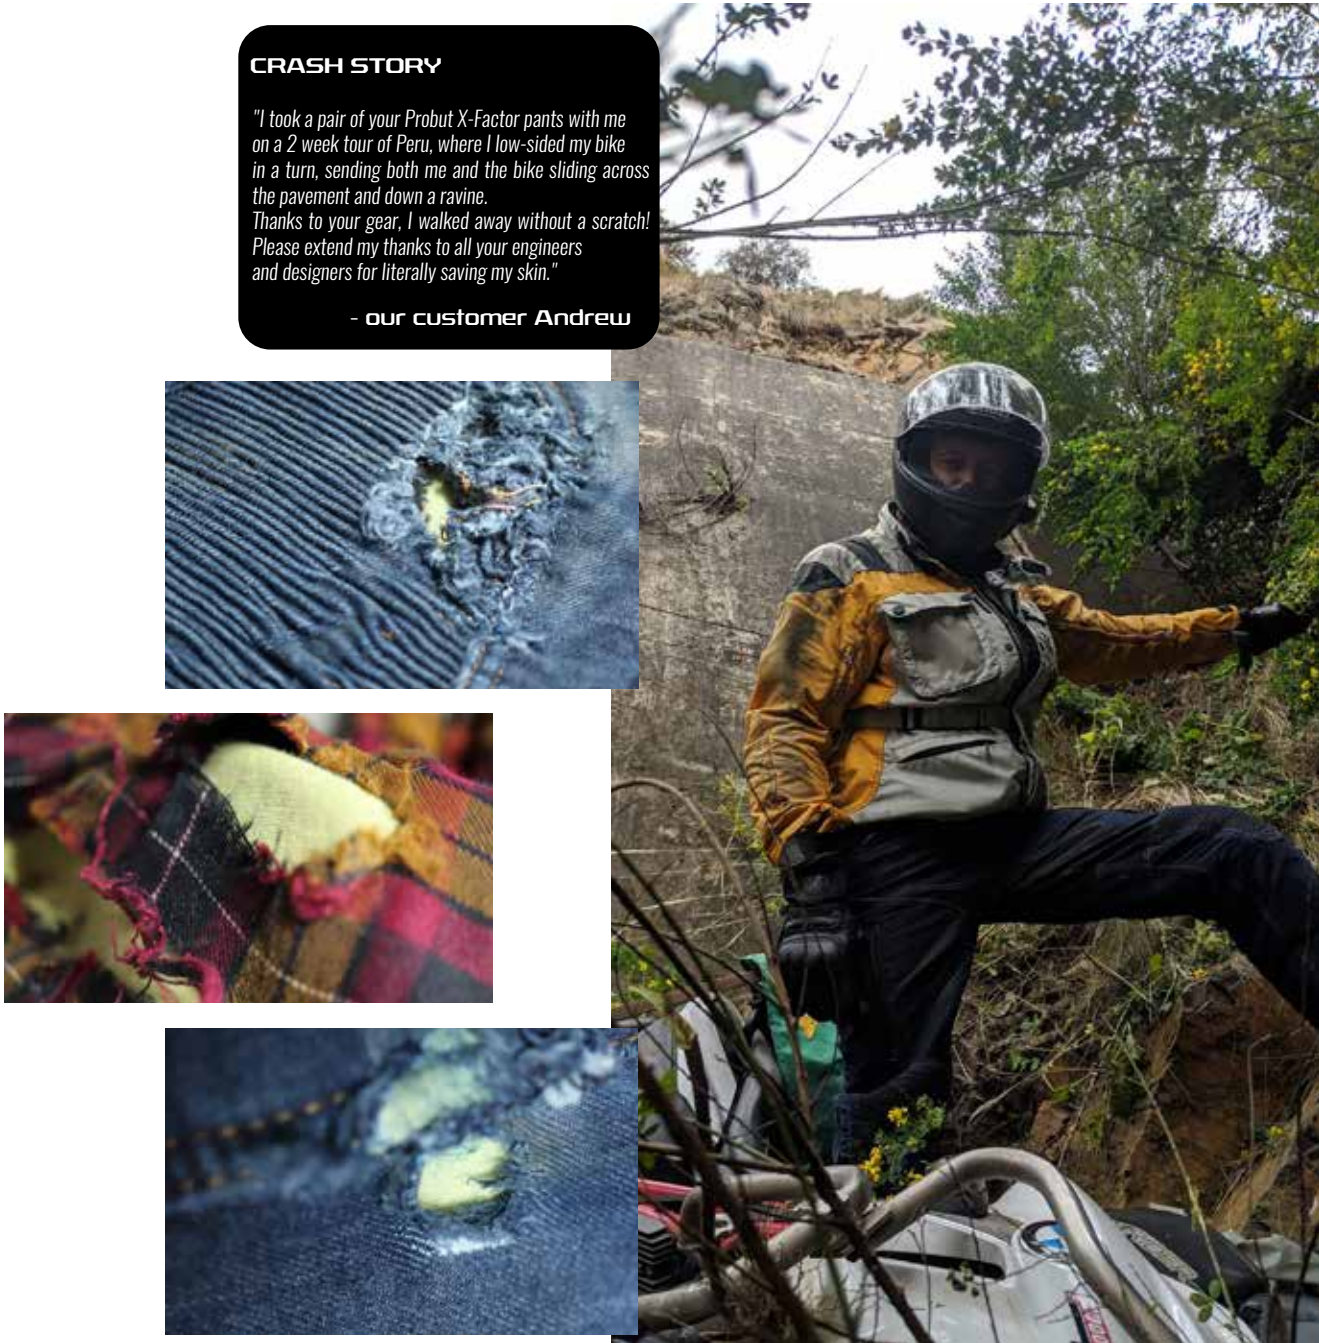

It is very simple!
Please, fill out the form on website www.trilobitemoto.com including the description of the accident and photo documentation. Submit the form with your contact information, and send us the damaged item to our headquarters.
Our team of experts will analyze the clothing after the accident, and our customer support will contact you regarding the new item.
Our philosophy is clear. We do not sponsor any sport riders, we sponsor regular people riders just like you, who by riding in our Trilobite® clothing give us the feedback about the performance of our products. On return, we give the new clothing with our thank you note.

Please send us the damaged item to this address:

CRASH STORY

"I took a pair of your Probut X-Factor pants with me on a 2 week tour of Peru, where I low-sided my bike in a turn, sending both me and the bike sliding across the pavement and down a ravine. Thanks to your gear, I walked away without a scratch! Please extend my thanks to all your engineers and designers for literally saving my skin."

SIZE CHARTS

Following pages carry all size charts. In order to find the right size, keep in mind that it is important to measure your body. Take your tape measure and measure yourself like you see on the picture. Based on the measurement, find the right size on the chart. We believe that with the correct measurement and the size charts you will be able to find perfect size of our product which provides the proper function of Trilobite® motorcycle apparel.

All dimensions are in cm.

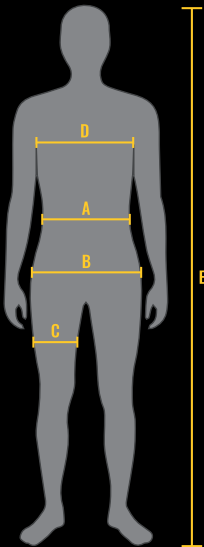

Men's & women's inseam

Inseam length available in the Trilobite® product collection.

All dimensions are in cm.

Men's apparel

US PANT SIZE	28	30	32	34	36	38	40	42	44	46
EU PANT SIZE	44	46	48	50	52	54	56	58	60	62
JACKET SIZE		S	M	L	XL	2XL	3XL	4XL	5XL	
A) Waist	72-76	76-80	80-84	84-88	88-92	92-96	96-100	100-104	104-108	108-112
B) Hip (19cm from waist)	87-91	91-95	95-99	99-103	103-107	107-111	111-115	115-119	119-123	123-127
C) Thigh	52-53	54-55	56-57	58-59	60-61	62-63	64-65	66-67	68-69	70-71
D) Chest		90-95	95-101	101-106	106-111	116-121	121-126	126-131	131-136	
E) Body height		168-172	172-176	176-180	180-184	184-188	188-192	192-196	196-199	

A) WAIST - Measure around the natural waist line, inline with the navel, keeping the tape horizontal.

B) HIP - Measure around the fullest part of your hips, about 19cm below waist line, keeping the tape horizontal.

C) THIGH - Measure around the thigh just below the crotch, keeping the tape horizontal.

D) CHEST - Measure around the fullest part, under the armpits, keeping the tape horizontal.

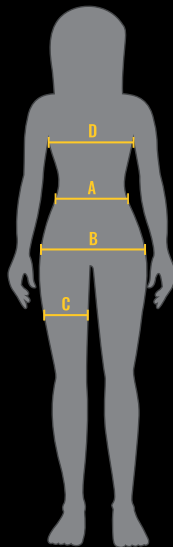

E) BODY HEIGHT - Stand against a wall, ask someone else to measure from the floor to the top of your head.
